

Background of the problem statement:

Simplona Tech. Solutions require a Full Stack application EMS (Employee Management System) to maintain their employee profile details.

We need to create a Full Stack Application to maintain the details of employees using the multi-layered application (Data access layer, Business logic layer and app service layer) with MS-SQL database.

Prerequisites:

Basics of C#, MS-SQL Server, ASP.Net MVC, and Web API

Development Environment:

- Windows 10
- Visual Studio 2022 Community Version

Requirements:

- User will able to get all the details of employees by using Get Method.
- User will able to get employee details by Id using Get Method.
- User will able to save the employee details using Post Method.
- User will able to delete the employee details using Delete Method.
- User will able to update the employee details using Put Method.
